

Harvest Manager

Woodstar Software's Harvest Manager system supports the planning, scheduling and managing of tasks at fruit growers, pack houses, warehouses and farms.

This Windows-based PC software allows information to be shared across standard PC's at organisations so that managers can more effectively plan tasks and assign resources.

Main benefits of the system

- Full traceability from the field through to the customer's shelves
- More effective planning and optimisation of costs
- Live field data
- Reports on your mobile or laptop
- Irrigation system integration
- Total human resource management
- Timesheet logging for non scan based tasks
- In depth costing, charts and analysis reports
- Data export to accounting packages: Earnie, Sage, and Landmark

A very simple example of Harvest Managers use is for a fruit/vegetable grower. The system can be installed easily and within minutes can import your staff from your accounts package and start to record today's timesheets.

Harvest manager is a very easy to use system that comes bundled with many powerful reports as standard. The system is built in such a way that it can easily be adapted to suit your exact business requirements while still maintaining its core functionality of managing and paying your staff.

If you would like any further information on Harvest Manager or any of the other systems made by Woodstar Software Ltd please contact our sales director Andy Crokey by any of the below means.
