

## PackStar

Woodstar Software's PackStar product takes over from where Harvest Manager left off.

When the product is received at the packhouse PackStar will track the goods through the packhouse, recording every movement and every process that happens to it. For example any QC check or reprocessing that happens to the product is recorded and can be viewed by a whole suite of management reports.

### Main benefits of the system

- Manage and pay your staff
- Goods tracking
- Order materials and stock
- 'At a glance' stock reports
- Future picking estimates
- Monitor stock against sales
- Seamlessly intergrates with EDI and accounts packages such as Sage
- Generates SSCC's and ASN's as required by leading supermarkets
- Advanced flexible reporting on every aspect of your business

A very simple example of PackStar's use is for a fruit/vegetable grower. The system can be installed easily and within minutes can start tracking your goods from intake into storage locations within your warehouse.

PackStar is a very easy to use system that comes bundled with many powerful reports as standard. The system is built in such a way that it can easily be adapted to suit your exact business requirements while still maintaining its core functionality of tracking goods throughout your warehouse.

If you would like any further information on PackStar or any of the other systems made by Woodstar Software Ltd please contact our sales director Andy Crokey by any of the below means.
